PROFILE

I'm a motivated Front-End Developer that likes to combine the art of design with programming. I can easily translate a UI/UX design to code that both implements the design and the functionality. I like to actively think about which solutions fit a problem best and try to always keep future changes and best practices in mind. Working in a team is no problem for me. I'm easygoing around other people, but can also work on an independent basis. I like to keep track of the newest technologies to always stay up to date and know what's going on in my sector.

SKILLS

JavaScript
TypeScript
React.js
Redux
Next.js
